Glenbrook Farm

About Us

Matt started raising commercial Katahdin sheep in 2008 on his parent's farm. In 2009, he sold that flock and bought a registered flock of Katahdins, and moved them to the current farm location. In 2013, he joined the National Sheep Improvement Program which provides estimated breeding values to help select animals using data. In 2018, he added a small flock of White Dorpers from Paul Lewis in Oregon. He also added a few Romanovs that same year. Last year, we added Texels from the West Virginia University flock dispersal which brings our current ewe flock to approximately 130 Katahdins, 30 White Dorpers, 20 Romanovs and 20 Texels.

Our goal as a farm is to use data and visual appraisal to breed sheep that excel in commercial sheep production. For any questions please contact Matt Nolt at **(717) 419-1980**.

Thank you for your interest in our sheep!

Matt and Katie Nolt

NSIP EBV and Indexes Descriptions

BWT: Birth Weight EBV (kg) estimates direct genetic effects on weight at birth. Positive selection is anticipated to increase birth weight and have correlated positive effects on early lamb survival, especially with twins and triplets. Negative selection is anticipated to reduce birth weight and lambing difficulty associated with oversize lambs, especially in singles.

WWT: Weaning Weight EBV (kg) provides an estimate of preweaning growth potential and will likely receive positive selection emphasis in most flocks.

PWWT: Postweaning Weight EBV (kg) combines information on preweaning and postweaning growth to predict genetic merit for postweaning weight at 120 days. Positive selection is expected to favor rapid growth to typical market ages.

NLB: Number of Lambs Born EBV evaluates genetic potential for prolificacy. Expressed as numbers of lambs born per ewe lambing. Ewes with +0.10 are expected to have an average of 0.10 more lambs at each lambing than average ewes and their daughters are expected to have an average of 0.05 more lambs at each lambing compare to daughters of average ewes.

NLW: Number of Lambs Weaned EBV evaluates combined ewe effects on prolificacy and lamb survival to weaning. Expressed as number of lambs weaned per ewe lambing. Ewes with 0.10 are expected to wean an average of 0.10 more lambs at each lambing than average ewes, and their daughters are expected to wean an average of 0.05.

MWWT: Maternal Weaning Weight EBV (kg) estimates the genetic effects of the ewe on the weaning weight of her lambs (a measure of the ewe’s merit for mothering ability). Mainly reflects genetic differences in ewe milk production. Ewes whose lambs grow faster than predicted are assumed to be better milk producers, those that grow slower are assumed to produce less milk.

Scrapie Genotype Resistance Descriptions

RR — Resistant **QR** — Moderately Susceptible **QQ** — Highly Susceptible

Scrotal Circumference: Rams with larger scrotal circumference tend to produce more semen of greater viability and tend to sire daughters that reach puberty earlier and ovulate more eggs.

About This Sire

This is one of the sires I purchased from WVU with the rest of my Texel flock. He has good growth and great carcass quality. Here are his carcass EBVs and index: Pfat -2.5, Pemd .8, SRC 112.7, Carcase+ 142.2. Whether you're looking to improve carcass quality for direct market lambs or just eye appeal for the ethnic buyers, Texels will get it done. We have semen available to sell from this ram.

About This Sire

This is a homegrown sire from one of my original ewes and a non-NSIP ram that I bought in for new genetics. He has no NSIP background but with over 330 progeny in 5 different NSIP flocks he is one of the best proven rams in NSIP. With a low NLB & NLW, high MWWT and solid growth his offspring is perfect for low input flocks. We have semen available to sell from this ram.

About This Sire

We co-own this ram with Sunset Acre Katahdins. One of 3 rams we bought from Ewe Lamb Right Farm in the last 2 years. This is a grandson of Dans Quad Queen ewe, a Katahdin ewe of unknown origin or age that had 22 lambs in 8 years recorded in NSIP! This sire has a insanelly high NLB & NLW and good MWWT. If you want to improve your NLB & NLW look at this sires offspring.

ELR 21271: Katahdin Sire Ram

Registration: 181008 **Genotype:** QR **Date of Birth:** 3/24/2021

About This Sire

This is one of 3 rams we bought from Ewe Lamb Right Farm in the last 2 years. Sired by Dan's WRI 19065 (the General) which was the highest selling ram at the 2019 Virginia Tech ram sale. I really like the build and confirmation of this ram. Unfortunately we lost this ram to fighting this spring and will have limited offerings from him.

ELR 21400: Katahdin 50% Sire Ram

Registration: x182907 **Genotype:** QR **Date of Birth:** 10/12/2021

About This Sire

This is currently one of the highest EBVing Katahdins in NSIP! Sired by Dan's WRI 19065 (the General) which was the highest selling ram at the 2019 Virginia Tech ram sale and the dam is Dan's Quad Queen herself, a Katahdin ewe of unknown origin or age that had 22 lambs in 8 years recorded in NSIP. Whether you want to improve growth or maternal traits this sires offspring will do it!

FETT 274J: Romanov Sire Ram

Registration: U16744 **Genotype:** QR **Date of Birth:** 3/27/2021

Birth Type: 2

Weight: 125 lbs. as of 6/13/2023

Sire: USAMARC 1514103

Dam: FETT 111H

NSIP ID: N/A

Scrotal Circumference: 30 cm as of 6/13/2023

About This Sire

I picked this ram up in Iowa while on our belated honeymoon! We needed new Romanov genetics and are happy with him. If you want to increase your lambing percentages or do accelerated lambing try a Romanov ram on your flock and keep all the daughters. They won't be the prettiest sheep but I'm willing to bet they will be your most profitable.
