Dear Friends:

Please make plans to join us for our 41st Annual Southwest Virginia BCIA Performance Tested Bull Sale to be held on Saturday, March 28 at 12:00 noon. Special thanks to Brian and Kayla Umberger at Mountain Spring Farm for the excellent job they have done developing the bulls. Our annual Open House at the test facility outside Wytheville will be held on Sunday March 22, from 1:00-4:00 p.m. This will be an excellent time to view the bulls and visit with the breeders and everyone involved, as well as enjoy a great lunch and some fellowship!

The Southwest BCIA Bull Sale has earned the reputation as the premier source of multi-breed genetics in our region. This year's sale offering upholds the strong tradition of quality this sale has been known for. Please study closely the pedigrees, performance data, EPDs, and other data assembled on this set of bulls. The BCIA consignors take very seriously their responsibility to put forth a product that will meet your needs as commercial cattlemen. The bulls have met BCIA's stringent requirements to make the sale, and BCIA stands behind these bulls 100% with our guarantee providing assurance on their soundness and fertility.

Along with the bulls, we will offer a high quality set of females through the BCIA-Influenced Heifer Sale. Heifers are certified as Virginia Premium Assured Plus females, and each has met program standards for genetic merit, reproductive soundness, physical correctness, and health status. Many of the heifers are multiple-generation AI, and sell guaranteed bred to calving ease bulls. These females originate from excellent herds.

The sale will be available online through CowBuyer.com. If you cannot join us in person, we hope this service provides you the convenience and ability to participate in the sale. See details contained in this catalog for more information. Video clips are also available on all the bulls which can be accessed on the BCIA website. As always, we will have bidding available over the teloauction or feel free to give one of us a call if you need assistance prior to or during the sale. We would be happy to assist you any way we can to secure a bull that meets your needs.

The bulls will be delivered to the sale facility in Wytheville the day prior to the sale. Call any of the consignors, Brian Umberger, or myself if we can be of assistance in any way. We look forward to seeing you sale day!

Sincerely,

Scott P. Greiner
BCIA Educational Advisor

41st Annual Southwest Virginia Performance Tested Bull and BCIA Influenced VA Premium Assured Plus Bred Heifer Sale

Saturday, March 28, 2020 • Noon

Bottomley Sale Facility, 195 Kenton Run, Wytheville, VA

*Directions: Use exit number 77 off Interstate 81
just north of Wytheville. Travel to access road west of interstate.
Turn right on Kenton Run (next to Exxon station), and travel ~1 mile to sale pavilion.*

OPEN HOUSE SUNDAY, MARCH 22, 1:00PM-4:00 P.M.

SOUTHWEST BULL TEST STATION, Mountain Spring Farm, 255 Grippy Run Road, Wytheville, VA

*Directions: I-81 to Exit 70. Follow US 52 North 4.6 miles to State Route 680 (Black Lick Road).
Take a left on Black Lick Road.
Go 1.9 miles to Grippy Run Road. Test Station will be on your right.*

SELLING 121 BULLS PLUS 30 FALL-CALVING HEIFERS

ABOUT THE BULLS AND THEIR PERFORMANCE

Scott P. Greiner, Extension Animal Scientist - Virginia Tech

Virginia BCIA contracts with Mountain Spring Farm, Wytheville, VA to develop bulls for its members with the following basic objectives: (a) To provide a standard, impartial postweaning gain test and development program that will furnish records which will be useful to the buyer and consignor in their breeding programs; (b) To provide a source of and market for performance tested bulls; (c) To provide quality genetics which address the demands of the industry, and (d) To serve as an educational tool for beef cattle improvement and promotion.

How the Bulls Have Been Handled

Eighty one Senior bulls (calved September 1 through December 31, 2018) and 90 Junior bulls (calved January 1 through March 31, 2019) were delivered to the SWBTS on October 8, 2019 and went on test October 29 following a 21 day warm-up period. Both Senior and Junior bulls completed the 112-day test February 18. Upon delivery to the station bulls were vaccinated for clostridial diseases, IBR, PI3, BVD, BRSV, Pasturella, Haemophilus Somnus, and dewormed. They were fed a silage ration supplemented with dry corn, alfalfa haylage, and a commercial protein supplement. The ration was formulated to contain approximately 75% TDN and 13% crude protein on a dry-matter basis.

Sale Requirements

Qualifications for bulls selling within each breed test group was based on the following criteria:

Growth EPDs: All bulls selling meet minimum genetic requirements (YW EPD) for Virginia Quality Assured (VQA) Purple Tag Feeder Calf Program.

Frame Score: Minimum frame score of 5.0 for all breeds.

Reproductive Soundness: All bulls have been subjected to a breeding soundness evaluation including scrotal circumference measure, internal palpation, and penal inspection. Senior bull evaluation included semen evaluation, and has satisfactory rating as defined by the Society for Theriogenology.

Conformation: A committee evaluated all bulls for structural soundness and phenotype. Unsound or unsuitable bulls have been eliminated.

Sale Eligibility and Order: Additional bulls were eliminated and sale order established using an index combining individual performance (adjusted YW and test ADG) and EPDs (CED or BW, WW, YW, Milk, MB, REA).

Health and Fertility

Negative Anaplasmosis test at delivery. Negative BVD PI test at delivery. Out-of-state health papers available sale day. All bulls evaluated for breeding soundness and fertility- guaranteed to be breeders. Senior bulls have passed full breeding soundness exam (including semen evaluation). Consulting veterinarians are faculty from VA-MD Regional College of Veterinary Medicine. See inside back cover for full guarantee.

Performance Records

Expected Progeny Differences (EPD)

An EPD is an estimate of the genetic value of an animal as a parent. Specifically, EPDs predict the difference in performance of the future offspring of a parent, compared to the future offspring from another parent in the same breed. EPD values may only be directly compared between animals within the same breed.

EPD	Production EPDs					Maternal EPDs		Carcass EPDs		
	CED	BW	WW	YW	DOC	CEM	Milk	MB	RE	Fat
	+6	+1.0	+45	+92	+11	+7	+24	+45	+35	-005

Calving Ease Direct (CED) - Predicts the ease with which a bull's calves will be born to first calf heifers. Higher EPD indicates a higher percentage of unassisted births.

Birth Weight (BW) - Predicts differences in progeny birth weight, measured in pounds. Higher EPDs indicate heavier birth weights.

Weaning Weight (WW) - Predictor of bull's ability to transmit weaning growth to his progeny. Expressed in pounds.

Yearling Weight (YW) - Predictor of bull's ability to transmit pre and post-weaning growth to his progeny. Expressed in pounds.

Docility (DOC) - Predicts difference in yearling cattle temperament, with a higher value indicating more favorable docility (expressed as percentage having most desirable temperament score).

Calving Ease Maternal (CEM) - Predicts the average ease with which a sire's daughters will calve as first-calf heifers, with a higher value indicating greater calving ease in first-calf daughters.

Maternal Milk (Milk) - Predictor of bull's genetic ability to transmit milk and maternal ability to his daughters. EPD expressed as additional pounds of calf weaned by the bull's daughters.

Marbling (MB) - EPD predicts differences in USDA marbling score. Expressed in marbling score units.

Ribeye Area (RE) - Predictor of bull's genetic ability to transmit carcass ribeye area. EPD expressed in square inches.

Fat Thickness (Fat) - Predicts differences in progeny external fat thickness, measured between the 12 and 13th ribs. EPD expressed in inches.

EPD Accuracy (ACC) - Accuracy is an indicator of the reliability of an EPD. Accuracy values range from 0.0 to 1.0. Values approaching 1.0 are reflective of more information used in the calculation of the EPD, and less risk the EPD will change with additional information. I = interim EPD, PE or P = pedigree estimate, BK = backsolution EPD.

Multi-Trait Index EPDs

	\$Values
\$M	+60
\$W	+55
\$B	+125

Angus Maternal Weaned Calf Value (\$M) - Index value expressed in dollars per head, is the expected average difference in future progeny profitability from conception to weaning. Includes both revenue and cost adjustments associated with differences in calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Angus Weaned Calf Value (\$W) - Index value expressed in dollars per head, is the expected average difference in future progeny profitability differences due to genetics from birth to weaning. Includes both revenue and cost adjustments associated with differences in birth weight, weaning weight, milk, and mature cow weight.

Angus Beef Value (\$B) - Represents the expected average dollar-per-head difference in the progeny postweaning performance and carcass value compared to progeny of other sires. Combines estimates of genetic merit for growth and carcass merit, which are adjusted for differences in costs of production and expected premiums/discounts associated with grid marketing of progeny.

Gelbvieh \$Cow (\$Cow) - A higher number represents more profitable genetics for maternal productivity. Bulls with higher \$Cow values would be expected to produce daughters with stayability and reproductive efficiency as well as other traits that lead to profitability in a production system, such as milk, calving ease, moderate mature weight and the ability of calves to gain, performance in the feedlot and at slaughter.

Gelbvieh Feeder Profit Index (FPI) - Terminal index designed to aid producers in selecting sires whose progeny will perform in the feedlot and carcasses are sold on grade and yield system.

Hereford Baldy Maternal Index (BMI) - Index designed for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows and heifers. Retained ownership of calves through the feedlot phase of production is assumed, with fed cattle marketed on a Certified Hereford Beef pricing grid.

Hereford Certified Hereford Beef Index (CHB) - A terminal sire index, where Hereford bulls are mated to British-cross cows and all offspring are sold as fed cattle on a CHB grid.

Simmental All Purpose Index (API) - Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Simmental Terminal Index (TI) - Predicts expected difference in economic merit between bulls when all progeny are placed in the feedlot and sold on a carcass grade and yield basis. EPD expressed in progeny dollars per head.

EPD Averages - Spring 2020

Individual Performance

	BW	WW	Test YW	ADG	End WL	Frame	Scrotal	U%IMF	URE	UFAT
Perf.	82	740	1215	3.75	1375	6.0	35.5	3.75	13.8	0.25
Ratio	102	108	105	110				120	107	95

Birth Weight (BW) - Bull's actual birth weight, and within herd ratio. ET = embryo transfer. Absence of a ratio may indicate the bull did not have contemporaries for ratio calculation.

Weaning Weight (WW) - Bull's 205-day weaning weight adjusted for age of dam, and within herd ratio. ET = embryo transfer. Absence of a ratio may indicate the bull did not have contemporaries for ratio calculation.

Yearling Weight (Test YW) - Beef Improvement Federation adjusted 365-day weight calculated from off-test weight, and adjusted for age of dam. Ratio relative to all bulls in test group (same breed and age).

ADG - Cumulative average daily gain for entire test period. Ratio relative to all bulls in test group (same breed and age).

End Wt. - Actual weight when bull completed test.

Frame - Frame score of bull at completion of test period.

Scrotal - Actual scrotal circumference in cm at completion of test.

Ultrasound Data

Ultrasound images were collected as part of the test procedures by Dr. Andy Meadows. Images were sent to an accredited laboratory for measurement determination and adjusted measures provided by breed associations.

Percent Intramuscular Fat (U%IMF) - Objective estimate of the percentage of intramuscular fat within the ribeye muscle (marbling) adjusted to 365 days of age. Ratio relative to all bulls in test group (same breed and age).

Ribeye area (URE) - Ribeye area measured in square inches adjusted to a constant age of 365 days. Ratio relative to all bulls in test group (same breed and age).

Fat thickness (UFAT) - Measurement presented is 12-13th rib fat thickness in inches. Measurements have been adjusted to 365 days of age (ratio relative to all bulls in same test group).

The following table presents breed averages for ultrasound traits for all bulls in each test group:

Ultrasound Data Breed Means

16 PB Simmental	0.17	12.4	2.92
20 SimAngus	0.17	12.9	3.16

Pedigree Information

Two-generation pedigree listed for each bull.

Sire- EPDs listed. ACC indicates accuracy which is reflective of the number of progeny recorded.

Dam- EPDs listed. Age indicates age of dam when bull was born. WWR lists number of calves with weaning data recorded and their average weaning weight ratio. Note that all calves may not be included in WWR based on contemporary group structure.

Coat Color & Polled/Horned Genotyping Simmental, Simmental Hybrid, Gelbvieh, and Gelbvieh Balancer bulls have been genotyped for coat color. Homozygous black bulls are designated as such. Bulls not designated as homozygous black can be assumed to carry a red gene. Bulls genotyped and found to be homozygous polled are designated as such.

EID Number Each bull has been tagged with an electronic RFID tag. The electronic identification number is provided in the catalog.

Genetic Condition Genotyping BCIA follows each breed association's policy regarding the testing and reporting of genotypes for genetic conditions. This policy also applies to registration requirements. For example, the American Angus Association requires all bulls be pedigree-free or tested free for genetic conditions of Arthrogryposis Multiplex (AMF), Neuropathic Hydrocephaly (NHF), and Contractural Arachnodactyly (CAF). Hence all bulls are either known to be free or tested free of these conditions. Results, as appropriate, and provided in the pedigree documentation of each bull.

Genomically Enhanced EPDs Several bulls have had their EPDs enhanced through the use of genomics (DNA markers, molecular breeding values). Genomic results are incorporated into the computation of the EPDs for several traits, resulting in enhanced EPDs and accuracy values. Bulls which have genomically enhanced EPDs are denoted with the above logo in the catalog. The specific genomic

Retained Semen Interest For some bulls, the breeder may elect to retain a semen interest. Bulls affected are designated in the catalog. In all cases, the buyer will have 100% possession and salvage value of the bull. Should the situation arise that the breeder desires to collect semen on the bull, they will be entitled to do so and work with the buyer in a mutually agreed upon manner (at breeder's expense). The buyer will be entitled to their portion of any revenue from semen sold on the bull (portion designated in catalog). Note that only a very small percentage of bulls selling with semen rights retained ever get collected.

MANAGEMENT OF THE YOUNG BEEF BULL

Scott P. Greiner Extension Animal Scientist- Virginia Tech

Management Prior to the Breeding Season

Your newly purchased yearling bull has recently completed a gain test, which provided a high plane of nutrition. Since the completion of the test, the energy level of the diet was reduced and intake limited to prevent excessive fat deposition. The bulls have been managed to be body condition score 6 on sale day. This will give the bull adequate reserves of energy for use during the breeding season. Yearling bulls can be expected to lose 100 pounds or more during the course of the breeding season.

Acquiring a new yearling bull at least 60 to 90 prior to the breeding season is critical from several aspects. First, this leaves ample time for the new bull to get adjusted to the feed and environment of his new home, as well as an opportunity for several new bulls to be commingled for a period of time prior to turnout. Secondly, adequate exercise, in combination with a proper nutritional program, is essential to "harden" these bulls up prior to the breeding season. A facility for the newly acquired bull that allows for ample exercise will help create bulls that are physically fit for the breeding season. The nutrition of the bull will be dependent on body condition. Yearling bulls are still growing and developing, and should be targeted to gain 2.0 to 2.5 pounds per day from a year of age through the breeding season. Bulls weighing approximately 1200 pounds will consume 25 to 30 pounds of dry matter per day. This intake may consist of high quality pasture plus 12 lbs corn, grass legume hay plus 12 lbs corn, or 80 lbs corn silage plus 2 lbs protein supplement. Provide adequate clean water, and a complete mineral free-choice. Prior to the breeding season, all bulls should receive breeding soundness exams (BSE) to assure fertility. Bulls in this sale all passed a BSE. All bulls that are to be used should have a BSE annually. Because a variety of factors may affect bull fertility, it may be advisable to re-test these young bulls before the breeding season even if it has only been a few months since the pre-sale BSE.

Management During the Breeding Season

The breeding season should be kept to a maximum of 60 days for young bulls. This will prevent over-use of the bull, severe weight loss and reduced libido. Severe weight loss may impair future growth and development of the young bull, and reduce his lifetime usefulness. When practical, supplementing young bulls with grain during the breeding season will reduce excessive weight loss.

In single-sire situations, young bulls can normally be expected to breed a number of females approximately equal to their age in months. Using this rule of thumb, a newly purchased bull that is 18 months of age could be placed with 18 cows or heifers. Bulls used together in multiple-sire breeding pastures should be of similar age and size. Young bulls cannot compete with older bulls in the same breeding pasture. A common practice is to rotate bulls among different breeding pastures every 21 to 28 days. This practice decreases the breeding pressure on a single bull. Some producers use older bulls early in the breeding season, and then replace them with young bulls. The appropriate bull to female ratio will vary from one operation to the next based on bull age, condition, fertility, and libido, as well as size of the breeding pasture, available forage supply, length of the breeding season and number of bulls with a group of cows.

All bulls should be observed closely to monitor their breeding behavior and libido to ensure they are servicing and settling cows. Additionally, observe the cowherd to monitor their estrous cycles. Many females coming back into heat may be the result of an infertile or subfertile bull. All bulls should be monitored for injury or lameness that may compromise their breeding capability.

Management After the Breeding Season

Young bulls require a relatively high plane of nutrition following the breeding season to replenish body condition and meet demands for continued growth. Yearling bulls should be maintained in a separate lot from mature bulls, so these additional nutritional requirements can be provided. Body condition and projected mature size of the bull will determine his nutrient requirements during the 9 months following the breeding season. Bulls should be kept away from cows in an isolated facility or pasture after the breeding season. In the winter months, provide cover from extreme weather that may cause frostbite to the scrotum resulting in decreased fertility.

THEILERIA IN CATTLE

Scott P. Greiner, Extension Beef Specialist, Virginia Tech Department of Animal & Poultry Sciences
John Currin, Extension Veterinarian, Virginia-Maryland College of Veterinary Medicine

Theileriosis is an infectious disease of cattle caused by the blood parasite Theileria. Clinical signs are similar to anaplasmosis and include anemia, fever, and lethargy. Most clinical cases are occurring September-November and April-June but can be year-round. Theileria is found around the world, but is an emerging disease as it was first diagnosed in Virginia in early fall 2017. Similar to anaplasmosis, animals have acute disease and are persistently infected. Carrier animals are possible, and chronically infected animals may harbor Theileria, which can be a source of infection in herds. Ticks are important to transmission of Theileria, including the newly introduced Asian Longhorn Tick.

Some important notes regarding Theileria as it relates to the bulls in the 2020 Southwest Bull Test Sale:

- In recent weeks, testing has confirmed that Theileria is rapidly spreading throughout the state (and in Southwest Virginia). Given the difficulty of controlling known vectors (ticks), and without a treatment, it is nearly impossible to stop.
- Little is known about the epidemiology of this emerging disease, although it has been present in other countries around the world for several years with very little economic impact.
- Current evidence suggests that in healthy cattle, morbidity and mortality rates are very low (sickness tends to occur in immune-compromised animals)
- A blood test for Theileria is available, and is the only definitive way to check for the presence of Theileria in a herd or population
- The test station bulls were tested on 3/3/20. Based on these results, the herd can be considered infected with Theileria. No bulls have shown symptoms associated with Theileria. Further analysis of samples confirm no bulls have anemia based on Packed Cell Volume (an objective diagnostic measure of anemia)
- As more testing is being done, more Theileria is being identified in herds without previous clinical signs.
- Given the rate at which Theileria is spreading in the region, we believe these circumstances confirm the fact that Theileria may be widespread, and also are testimony to the fact that Theileria's impact on healthy cattle is likely to be minimal. There are a few naïve herds that may have a 5-10% death loss in the early stages of the disease.
- As a precaution, all cattle in the sale have been recently poured with a pyrethroid for parasite control (tick control in particular).
- Visit with your veterinarian if you have additional questions regarding Theileria.

 *Gambles Georgina 2005 [OSF]
 +*ZWT Georgina 2718 [AMF-CAF-DZF-DDF-MIF-NHF-OHF-OSF-RDF]

A moderate-framed powerhouse of a bull. He comes from a long line of exceptional females. The KR Georgina family is a mainstay in the Krebs Ranch herd. His dam is great-addered, broods AI every year and is our best female. His sire Goforth Admiral is in the Universal semen stand and is turning heads across the country with many calves born all over the country this year. Admiral comes from the powerful Lady family going back to Lady Standard 909. His maternal power is evident but he also doesn't give up on carcass with a 4.96 %IMF and a 14 square inch ribeye.

Maternal Power - Proof is in the pedigree!

TERMS & CONDITIONS

Except for those stated in the below terms and conditions, there are no warranties, either expressed or implied, as to merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy of the buyer, or any party claiming through buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

BIDDING: Each animal will be sold to the highest bidder. The person in charge will settle any disputes as to bids and his decision on such matters shall be final.

TERMS: Terms of the sale are cash, unless satisfactory credit arrangements have been established prior to the sale. All settlements are to be made with the clerks of the sales immediately following the conclusion of the sale and before any cattle will be released from the sale premises.

PURCHASER'S RISKS: Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the seller to see that animals are fed and cared for free of charge to purchaser until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

REGISTRATION CERTIFICATES: A transferred certificate of registry will be furnished to the purchaser for each animal within 45 days following date of sale or receipt of full payment.

HEALTH: All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B. and Bangs tests in accordance with Federal Regulation.

ANNOUNCEMENTS: Any changes from information of any kind in this sale book will be announced from the auction box and such announcements shall take precedence.

BULL GUARANTEE: All bulls sold are guaranteed, via written contract between BCIA and the seller, to be breeders. Guarantee will be applicable to bulls which prove to be infertile, have structural soundness problems (including foot soundness), or have other issues which apply under a

good-faith guarantee. Any bull that settles a reasonable number of healthy cows shall be considered a breeder. This guarantee is contingent upon the buyer providing proper management prior to, during, and after the breeding season. Proper management shall include appropriate nutrition, breeding management (bull to female ratio appropriate for bull's age, not commingling yearling bulls with mature bulls in same breeding pastures, proper observation of bulls during breeding season, etc.), and animal health care.

CLAIMS FOR REFUND OR ADJUSTMENT: All claims for refund or adjustment in the event the bull is a non-breeder due to infertility or unsoundness must be made in writing by end of first breeding season but not later than 12 months following the sale. It shall be the responsibility of the buyer to prove the animal is a non-breeder. A veterinarian's report on the causation of the bull being a non-breeder is required. If the bull proves to be a non-breeder, the seller shall be entitled to provide the buyer one of the following: a) full refund for the purchase price, b) replace the bull with another of equal value, or c) issue credit to the buyer redeemable at a future BCIA bull sale. The seller shall be entitled to any salvage value.

RIGHTS AND OBLIGATIONS: The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

All persons who attend the sale do so at their own risk. Neither Virginia BCIA, the Virginia Cattlemen's Association, the Bull Test Station or its management, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

HOW TO PURCHASE BULLS AT THE AUCTION IF YOU CANNOT ATTEND:

1. To Bid via Tel-O-Auction

If you will be unable to attend this sale, you can do your own bidding via a conference telephone hook-up. Buyers interested in this option should call the Virginia BCIA at 540/231-9159 prior to sale day. On sale day, until sale time, buyers should call 540/230-2680 or 540/239-2258. You will be assigned a unique bidder number with which to do your bidding. The sale manager can answer any questions you might have about using the tel-auction system. During the sale, bidders should call 800/309-2350. You will be prompted for an ID number – enter 4505514 followed by the # key. You will be asked to state your name and then you should be connected on the conference line.

2. To Bid Live Via the Internet

We are pleased to offer the 40th Annual Southwest Virginia Performance Tested Bull Sale and BCIA Influenced VA Premium Assured Plus Heifer Sale broadcast “live” over the Internet through Cowbuyer.com.

To watch or bid online, simply complete the following steps:

- View/bid online in Real Time
- Registration is required. Please register at least one (1) hour prior to sale time at www.cowbuyer.com
- High Speed Internet is required. Slower speed will not permit you to bid and keep pace in real time.
- Terms: Purchasing online constitutes a legal contract and promise for payment of purchases. All purchases must be paid within ten (10) days of sale date and prior to load out or delivery of cattle purchased.
- Cowbuyer.com is a service provider and is not responsible for the activity or inactivity of any technology, internet connection at the sale site or connection and technology of the bidders.
- For questions or information, contact: Aaron Ray Tompkins – 336/363-4639, atompkin@vt.edu
- After the sale, please contact Dr. Scott Greiner at 540/230-2680 to make arrangements for payment and delivery of your online purchase.

BCIA INFLUENCED VIRGINIA PREMIUM ASSURED PLUS HEIFER SALE

Heifers sell immediately following bulls

The Southwest Virginia BCIA-Influenced Heifer Sale was initiated to provide a source of high quality, commercial bred females from heifer producers which prescribe to the performance and genetic principles of BCIA. All heifers are certified as Virginia Premium Assured Plus Heifers.

Bred heifers are due to calve late August-October, and have been managed accordingly. Details on the Angus service sires as well as Angus and Simmental sires of the heifers are shown below. Many of the heifers are multiple-generation AI bred, and each consignor has extensive performance records available on each female and her relatives.

VIRGINIA PREMIUM ASSURED PLUS

BRED HEIFER REQUIREMENTS:

- EPD requirements for service sire of bred heifers (calving ease, growth) and sire of heifer (growth)
- Minimum pelvic area
- Guaranteed pregnant and bred within restricted time period
- Screened for frame size, muscling, structure, body condition, and other defects
- PI BVD negative
- Comprehensive vaccination program
- Requirements verified by a third party

Pregnant Heifer Guarantee - All heifers guaranteed pregnant on sale day. If a heifer sold as pregnant is proven open by a veterinarian within 30 days of the sale, the consignor will replace the heifer or refund the sale price of the heifer and take possession of the heifer.
