# Glenbrook Farm

## About Us

Matt started raising commercial Katahdin sheep in 2008 on his parent's farm. In 2009, he sold his commercial flock and bought a registered flock of Katahdins and moved them to the current farm location. He added a small flock of White Dorpers in 2018 from Paul Lewis in Oregon and added a Romanov ram and two Romanov ewes as well. In 2013, he joined NSIP which provides estimated breeding values that helps select animals using data. Our current ewe flock consists of approximately 130 Katahdins, 30 White Dorpers, and 20 Romanov sheep.

Our goal as a farm is to use data and visual appraisal to breed sheep that excel in commercial sheep production. For any questions please contact Matt Nolt at **(717) 419-1980**.

Thank you for your interest in our sheep!

*Matt and Katie Nolt*

## Schedule

**7:30 AM**—Coffee and Donuts

## Terms Used Throughout Catalog

### Registration:

Lots listed with registration “available” can be registered at buyer request within 30 days after the sale. Seller will cover cost of registration for animals that sell for over \$500. Buyers cover the cost of registration for animals that sell for under \$500.

### NSIP EBV and Indexes Descriptions

**BWT:** Birth Weight EBV (kg) estimates direct genetic effects on weight at birth. Positive selection is anticipated to increase birth weight and have correlated positive effects on early lamb survival, especially with twins and triplets. Negative selection is anticipated to reduce birth weight and lambing difficulty associated with oversize lambs, especially in singles.

**WWT:** Weaning Weight EBV (kg) provides an estimate of preweaning growth potential and will likely receive positive selection emphasis in most flocks.

**PWWT:** Postweaning Weight EBV (kg) combines information on preweaning and postweaning growth to predict genetic merit for postweaning weight at 120 days. Positive selection is expected to favor rapid growth to typical market ages.

**NLB:** Number of Lambs Born EBV evaluates genetic potential for prolificacy. Expressed as numbers of lambs born per ewe lambing. Ewes with +0.10 are expected to have an average of 0.10 more lambs at each lambing than average ewes and their daughters are expected to have an average of 0.05 more lambs at each lambing compare to daughters of average ewes.

**NLW:** Number of Lambs Weaned EBV evaluates combined ewe effects on prolificacy and lamb survival to weaning. Expressed as number of lambs weaned per ewe lambing. Ewes with 0.10 are expected to wean an average of 0.10 more lambs at each lambing than average ewes, and their daughters are expected to wean an average of 0.05.

**MWWT:** Maternal Weaning Weight EBV (kg) estimates the genetic effects of the ewe on the weaning weight of her lambs (a measure of the ewe’s merit for mothering ability). Mainly reflects genetic differences in ewe milk production. Ewes whose lambs grow faster than predicted are assumed to be better milk producers, those that grow slower are assumed to produce less milk.

### Scrapie Genotype Resistance Descriptions

**RR** — Resistant

**QR** — Moderately Susceptible

**QQ** — Highly Susceptible

# Our Sires

## LWD 161001: Dorper Sire Ram

**Registration:** RP122457 **Date of Birth:** 10/17/2016

-5	-1.2	-.9	-1	0	.9

### Description

This is a well-proven Paul Lewis ram that has 51 progeny in two NSIP flocks. While his numbers are not what we would like, he sired a lot of nice rams for us. I sold him last summer but am keeping a son of his. Fall born. Clean shedding.

## LWD 20241: Dorper Sire Ram

**Registration:** RP54227 **Date of Birth:** 3/27/2020

### Description

I paid a pretty penny for this sire at Paul Lewis sale spring of 2021. This is an awesome sire who's offspring will add pounds and quality to your lambs. Clean shedding coat.

**USD 18274: Katahdin Sire Ram**

**Registration:** 15338 **Genotype:** RR **Date of Birth:** 11/05/2018

**Description**

I co-owned this ram with LC Ranch. We bought him at the 2019 KHSI expo; he was the highest selling fall born ram on the sale. He died from pneumonia last summer so this is the last chance at his offspring. He was a medium framed, easy keeper with high parasite resistance. Fall born. He has 77 progeny in two flocks and is 50K Genotyped.
