★ Consigned by Mt. Hope Farm.
★ SELLING A FLUSH.

★ 1026 has one of the most important traits required to produce high-quality embryos, and that's a highly-predictable set of genetics. She is a result of stacking generations of predictable Gardiner genetics, which in turn produces some of the finest phenotype and genetic merit with the Angus breed. 1026 has been flushed five times with an average of five quality embryos per flush. She produced a GAR Transcendent daughter on December 21, 2022, and will be available for flushing in late March, April, May and July. Later dates may be available. A maximum of six flushes will be available in 2023. The price of a flush includes her initial FSH shots and transporting her to and from Trans Ova station in Ohio. All other expenses related to the flush, such as semen and charges by Trans Ova, will be the buyer's.

21 Four Frozen IVF Sexed Heifer Embryos

50% Guarantee, Stored at Trans Ova, MD

★ Consigned by Mt. Hope Farm.

★ Combine Rita 0510's top 1% WW, 1% YW, 2% W, 1% CEM and top 10% CW, SB, SC, top 15% SF, SG EPDs with GAR Sunbeam's calving-ease and birth weight EPDs, plus his top 3% MARB, 2% REA, 10% SM, 2% SG, 4% SB and his 2% SC and you have an embryo, that as a cow, will possess the in-depth, multi-traits required to consistently produce progeny that will meet or exceed the requirements to produce some of the best herd sires or replacement heifers that will command top dollar in any market. GAR Sunbeam's dam, GAR Ingenuity 3132, is a donor at Maplecrest Farms and is the dam of their all-time, high-selling bred heifers as well as a donor at the Baldrige herd in Nebraska. In 2020, EXAR Guru 87198B, the sire of this donor, had daughters sell for \$120,000, \$37,500 and \$24,000 at the EZ Angus Ranch Sale. Guru is used extensively at several seedstock producers such as EZ Angus, Wilks Ranches and Express Ranch. Sunbeam is considered one of the progeny proven sires in the Angus breed due to his of calving ease, growth, and carcass merit that is combined with superior foot quality and stature. His progeny are thick topped and deep bodied with excellent heel depth and foot size. His dam, GAR Ingenuity 3132, is considered by some to be one of the best cows that ever came from the Gardiner Ranch and is a long-time donor at Maplecrest Farms. Sunbeam was the sire of Maplecrest Farm's all-time, high-selling bred heifer in their 2021 production sale, and that heifer is currently a donor at the Baldrige herd in Nebraska. Sunbeam currently is a high-use AI bull at ST Genetics.

★ Consigned by Mt. Hope Farm.

★ Gardiner Ranch pedigreed donors and sires produce Gardiner Ranch quality embryos. These embryos possess the in-depth and multi-trait excellence that can only be obtained by generations of disciplined breeding as performed by such ranches as Gardiner, Express and a few others. RITA 01 is a paternal sister to GAR Home Town and in Gardiner Ranch's May 2nd "Meating Demand" Bull Sale they offered 28 of his sons. Rita 01's sire, GAR Ashland, ranks in the top 10% of the Angus breed for calving ease and yearling weight, and is in the bottom 45% for mature height. He is a +1.17 for Marbling and is +1.01 for Ribeye. With RITA 01's excellent calving-ease and milk EPDs, her top 10% YW, RE, and SC and respectable top 10% WW, 15% SB combined with GAR Sunbeams 2% SC, 2% SG, 3% MARB, 2% REA and 4% SB, you have embryos that, as cows, will produce quality beef, excellent heifers and herd sires.

★ Consigned by Mt. Hope Farm.

★ These embryos offer genetics that have a track record of producing a quality and consistent set of calves year after year. Raindance has proven to produce beautiful, top-producing heifers and bulls. The pedigrees of both the dam and sire of these embryos contain some of the best in Angus genetics, commencing with SAV Blackcap May 4136, one of Schaff Angus Valley's most famous cows, and the great sire Coleman Charlo 0256. On the donor's side we have Maplecrest Blackcap 1005, a cow that produced several bulls that sold in a Gardiner sale for \$5,000.00 and up. Then there is the famous Express Ranch's herd sire EXAR Denver 2002B. Since These embryos should possess well balanced multi-trait EPDs they, as cows, will have tremendous flexibility in their ability to produce calves intended for a specific market. "Tweaking" the mating selections could easily, without utilizing bulls with extreme EPDs, produce calves that will demand top prices in whatever market niche you select. The key components in the equation to successfully market cattle is to start with cows that have in-depth pedigrees, with genetic traits that have proven to succeed year after year. These embryos have the potential, as cows, to fill that requirement.

★ The donor dam of these embryos has a progeny weaning ratio of 102 on one natural calf along with progeny IMF and ribeye ratios of 100 on four head, and she ranks in the top 2% for CED and \$G, the top 3% for Marbling EPD, and also in the upper-echelon in many other categories.

heifers whose pedigrees, combined with production, Carcass, and \$Value EPDs indicate that they will consistently produce highly marketable calves, consider these embryos. Do the math (assuming a 50/50 genetic inheritance from sire and donor) these embryos offer potential EPDs of, for example, CED 10 (calving ease), WW top 12%, YW top 10%+, RE top 10%+, SB top 10%, SC top 10%. Your mating decisions can complement, or add value to these and other EPDs as your market demands.
